X - perm. pt.a

4, v - perm. pt. b (abatoare i independente)

a) prob.
$$5x = [1,2,3,4,5,6,4]$$
 = $\frac{1}{7!}$

$$P(E) = \frac{24}{30} = \frac{12}{15} = \frac{4}{5}$$

C)
$$P(X=0) = P("x(x) e mr par") pi $P(X=1) = P("x(x) e mr. impar")$.
Valourea medie a lui X?$$

$$P(x|2) = mr por = \frac{3}{4} = P(x=0) = \frac{3}{4} = P(x=1) = \frac{4}{4}$$

sunt imalipendente

d) prob.
$$(u = [2,3,1,1,2] \circ v = [2,3,1,1,2]) = p(prima) + p(a doua) - p(prima) a doua)$$

$$= \frac{39}{30} + \frac{39}{30} - \frac{1}{30} \cdot \frac{1}{30} = \frac{59}{30}$$

e)
$$P(u(2)=1 \ P_1^2 \ u(2)=2) = 0 \ grt$$

$$P(u(2)=1) \cdot P(u(2)=2) = \frac{n}{30} \cdot \frac{12u}{30} = \frac{12}{30^2} \int mu - s \ eqal \Rightarrow) \ mu - s \ independente$$

$$\begin{array}{cccc}
X N \begin{pmatrix} -1 & 0 & 1 \\
0,5-\theta & 0.5 & \theta \\
\end{pmatrix}$$

Sa re estimese o cu met momentelor.

$$E(x) = -1(0,5-\theta) + 0 + 1.\theta = -\frac{1}{2} + 2\theta = 0,1$$
egalôm $E(x) = X_8$

$$2\theta = 0,6 \Rightarrow \theta = 0,3$$

a)
$$f_{x}(x)$$
 $pt. x \in [0,2] = \frac{x^{2}}{4}$

$$f_{y}(y) pt. y = [2,5] = 1$$

$$f(x) = \int_{\frac{1}{2}}^{x} t dt = \frac{1}{2} \frac{t^{2}}{2} \int_{0}^{x} = \frac{x^{2}}{4} \times e[0,2]$$

E)
$$P(x \le 1, Y \le 3) = P(X \le 1) \cdot P(Y \le 3) = \mp (1) \cdot F(3) = \frac{1}{9} \cdot 1 = \frac{1}{9}$$

c)
$$E(3x+Y^2) = 3E(x) + E(Y^2) = 8 \cdot \frac{4}{3} + 2 = 6$$

 $E(Y^2) = \int_{-\infty}^{\infty} x^2 \cdot \frac{x}{2} dx = \frac{1}{2} \frac{x^4}{4} \Big|_{0}^{2} = \frac{16}{8} = 2$

$$E(x) = \int_{0}^{2} x \cdot \frac{x}{2} dx = \frac{1}{2} \frac{x^{3}}{3} / 2 = \frac{8}{6} = \frac{4}{3}$$
